

Resistance Thermoemter with Modular system QUICKTEMP

QUICKTEMP -

Resistance thermometer with modular connection system

Modular system • 1 resistance thermometer for all
process connections

Features

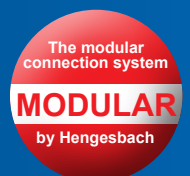

- 1 basic device for a wide range with more than 20 process connections in hygienic design for welding or screw-in
- Enhanced sustainability by
 - ▶ reduction of inventory costs
 - ▶ increasing of system availability
 - ▶ low life cycle costs by smart electronic
 - ▶ short response times because of optimized design for precise process control
 - ▶ significant improvement of cleaning costs
 - ▶ max reduction of contamination risks for humans and product
- available for resistance thermoemters TP60, TP62 and TP38 and compact resistance thermometers TP51 and TP52
- best solution together with Quick Calibrate Inside - QCI for easy connecting and calibration without disconnecting of the resistance thermometer
- high quality sensor-technology
- dismantling of the device without interference with the process, simplifies calibration of CCP's
- additional option: vibrations resistant measuring inserts

Applications

- Temperature measurement in tanks and pipelines, for example UHT's, heatexchanger, cooling processes, ...

QUICKTEMP
with easy connect

 **simplify
calibration**
