

**Modular alternative for metallicly sealing process connections**  
(thread in G1", -G1/2")  
for pressure- and temperature transmitter

Suitable for pressure transmitter type TPF... K3 and PSK3 and temperature transmitter WTH type TP16

**Features**

- ideal replacement for metallicly sealing process connections (thread in G1"; -G1/2")
- process connection G1": sealing with elastomer; FDA – conform
- process connection G1/2" : sealing with PEEK
- advantage: suitable for all already existing welding sockets and adapter
  - no exchange of existing process connections required
  - welding sockets and adapter remain unchanged
- broad range of process adapters available; i.e. Varivent®; DRD ; DIN11864-2; DIN 11851,... as well as welding sockets for tanks and pipes.
- proven typical features of the sensors and transmitters remain unaffected

**Applications:**

- predestined in the food and live science industries and other hygienic applications as an alternative to metallicly sealing connections
